

## Four Rack-Mountable 4"x 4" LCD Monitors

- Supplied in a 19" 2U steel and aluminium casing
- Each monitor features individual brightness, colour saturation and tally light
- BNC input & loop-through BNC output
- RS-232 control
- Unique design allows the monitors to be angled through 90 degrees

### Product Overview

The TLM-404 is a rack-mountable bank of four 4 inch LCD monitors housed in a smart robust aluminium and steel 2U 19" casing. Each of the four monitors has individual adjustments for brightness, contrast and colour saturation, and also features a tally light. To the rear of each screen there is a composite BNC input and loop-through BNC output, and there is also an RS 232 connection together with a power socket for 12v DC. The TLM-404 monitors have also been designed using a unique pivot system which allows the monitors to be angled through 90 degrees, even when rack mounted; making viewing much easier, especially if they are mounted at the top of a large rack. The TLM-404 represents a convenient and cost effective method of monitoring multiple channels both in the studio and OB situations.

### Features & Specifications

- BNC Input & Loop-through BNC output
- RS-232 Control
- 2U 19" robust aluminium & steel housing
- Unique pivot system allows monitors to be angled through 90 degrees
- Individual brightness and colour saturation adjustments
- Tally lights
- Runs on 12v DC power.

### Perfect For The Datavideo SE-800

In addition to using the TLM-404 monitors in a traditional rack-mount unit, Datavideo have also released a special monitor rack that attaches directly onto the popular SE-800 and SE-800AV 4-channel AV mixers—to provide a truly mobile and versatile video solution.
